

Software Engineer

Full Time

Melbourne, Remote

Do you want to explore the next-gen in tech?

Join us to solve real world problems, and have a *positive global impact*

Who we are

“Knowing that the work we do prevents injuries and saves lives inspires us”

Founded in 2018, Acusensus is an Australian start-up success story, with a mission to design and develop AI-enabled solutions that make the world a safer and more sustainable place to be.

Backed by a team of passionate subject matter experts, our flagship technology solution is a world first and provides governments across Australia and around the globe with an effective tool to address distracted driving and other dangerous driver behaviour on our roads.

Our growth is rapid! With global aspirations, our technology is already influencing significant behavioural changes on Australian roads and has gone live in other parts of the world. As a growing team, now with offices in Melb, Syd & the US, we are proud of our work and the impact we are making.

Opportunity

To join Acusensus is to be part of a contemporary development environment that is focused on the next generation of technology [***there is no legacy development here!***].

You will have the opportunity to work on solutions to previously unsolved road safety problems within a team who respect, support and push each other to get the best results.

What we offer

- The chance to work with innovative, world leading and cutting edge technology.
- Real job satisfaction - the work you'll do here will save lives and reduce road trauma around the world.
- Expert teammates that will help support and guide your development.
- Great career growth opportunities with the ongoing expansion of our team.
- Opportunity to take the lead on customer facing projects as well as solution designs.
- Flexible working arrangements including part time working from home.
- Highly attractive remuneration package, including short term and long term cash and stock incentives.

Our values

Impact - Collaboration - Integrity - Care

We are driven by our mission to develop and deliver solutions that make a positive and sustainable impact, creating safer communities across the globe.

We believe that solutions to any big challenge are best discovered through collaboration.

We pride ourselves on conducting our business ethically and responsibly. We keep our word; we deliver on our promises.

The safety and wellbeing of our employees, our customers and the community comes first here - we care about people.

What you'll bring

- Strong programming skills in either C#, C++ or Java and a willingness to primarily use C#.
- Strong academic performance in software engineering subjects.
- Experience developing software in a team with close collaboration.
- A passion for solving complex problems.
- Enthusiasm to create new applications that improve how the business at Acusensus operates and supports the performance of our solutions for road safety outcomes.
